

This rim was mounted with **Tire Life**® when the vehicle was new, by a coal mine in Alberta, Canada.

You can see by the original paint, the complete lack of rust, and several bright spots of metal that **Tire Life**® has protected the rim from any rust or scale build up for over 30,000 hours.

What is Tire Life®?

Tire Life® is a specially formulated, light viscosity fluid that offers exceptional tire and rim protection when added to the tire air chamber.

* Specialty formulas available.

Rust

Tire Life® stops rust buildup by providing a protective anti-oxidant coating on wheels and rims.

Tire Life® removes existing rust scale from wheels and rims, and reduces the amount of downtime normally required for refinishing wheels and rims.

Tire Life® installed in the recommended quantity, provides rust protection from the day the wheel is installed until it is dismantled.

Tire Life® will reduce the labor cost for tire dismantling.

Under Inflation

Between regular air checks, some loss of tire p.s.i. is expected. With each pound of pressure loss, load carrying capacity is reduced and tire temperatures increase. **Tire Life®** reduces this normal air loss. Bead seats, o rings, vent hole leaking, blistered, or cracked innerliners, even liners that are lifted loose from the ply will be sealed off very effectively by **Tire Life®**.

Cooling

In studies done by a major tire manufacturer, **Tire Life®** reduced tire casing temperature by as much as 7.5%. In other studies, **Tire Life®** reduced the tire operating temperatures by 19%. Whichever case, **Tire Life®** lowers tire temperature and that's good for the tire.
